Conventional programming vs ML

What is Artificial Intelligence?

AI In Marketing

AI In Banking

AI In Finance

AI In Agriculture

AI In HealthCare

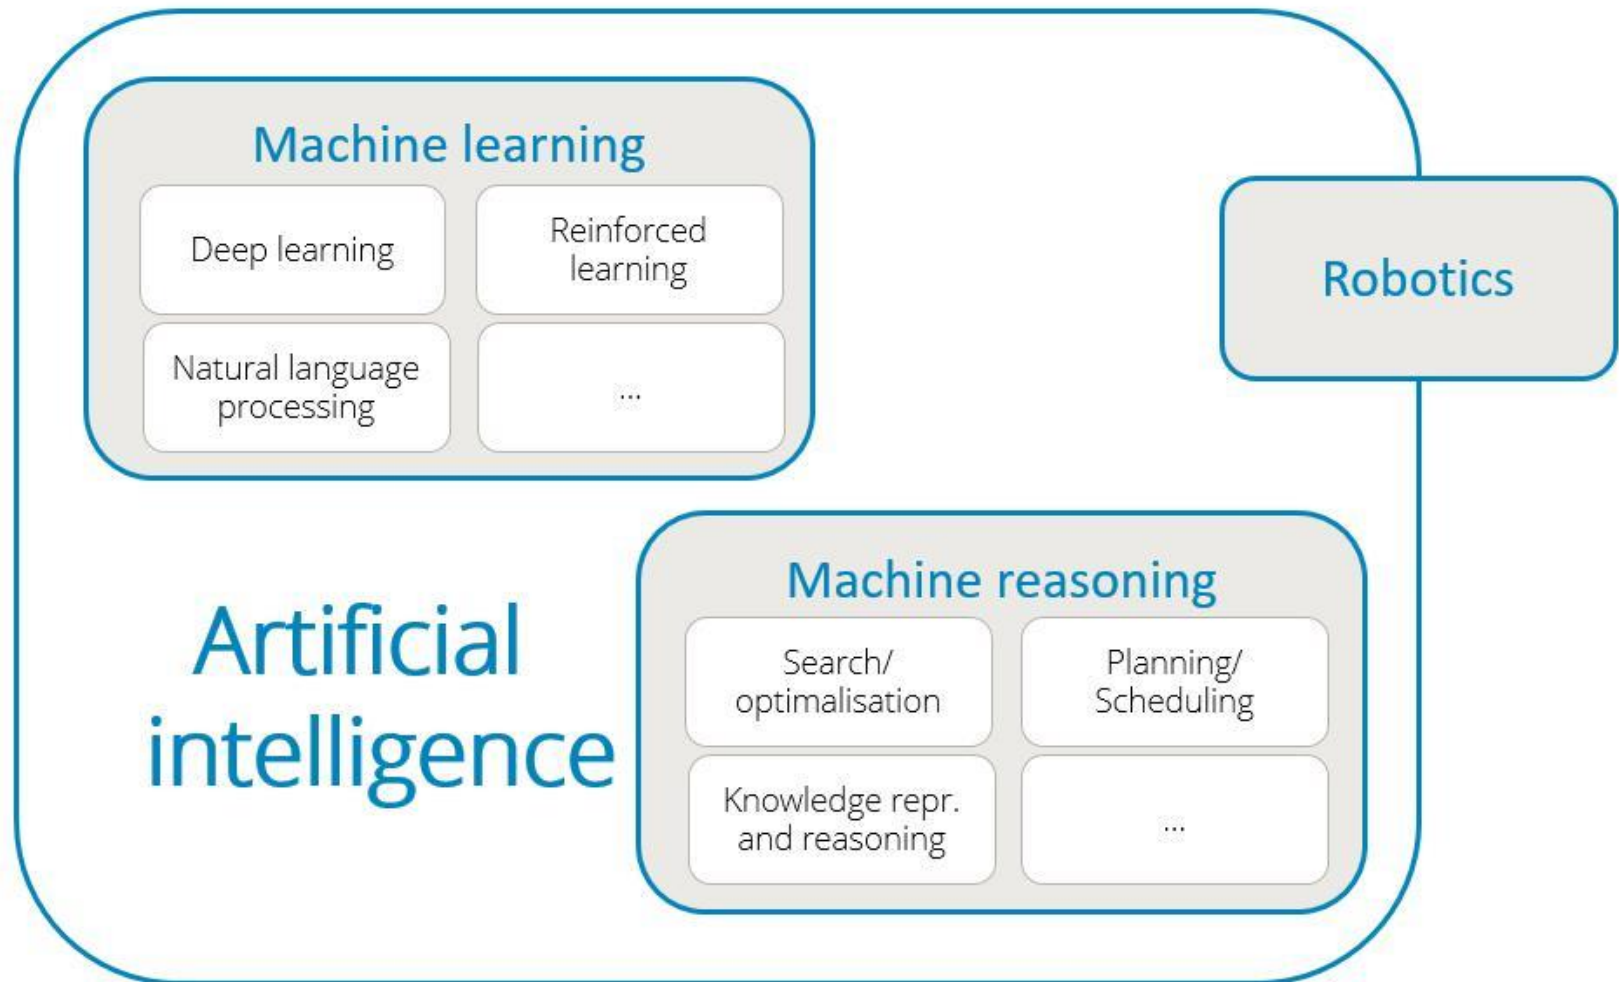

AI In Gaming

AI In Space Exploration

AI In Autonomous Vehicles

AI In Chatbots

## Conventional programming vs machine learning

### Traditional Programming

Previous Example: Determine if a heart will fail

### Machine Learning

Previous Example: Determine if a heart will fail

## What is Artificial Intelligence?

AI is a method of programming a computer, robot, or other object to think

AI is the study of how the human brain thinks, learns, makes decisions, and

In simple words

Artificial Intelligence is made up of the phrases Artificial and Intelligence, with Artificial referring to “man-made” and Intelligence referring to “thinking power,”

# Artificial Intelligence

**A way of making a computer, robot, or software think and act like a human.**

**Automation**

**“Hi, computer.”**

**“Hello, Sue. Pam’s coming at 3pm.”**

**Self-Driving Car**

**Play Against Computer**

Cognitive: relating to the processes of thinking and reasoning

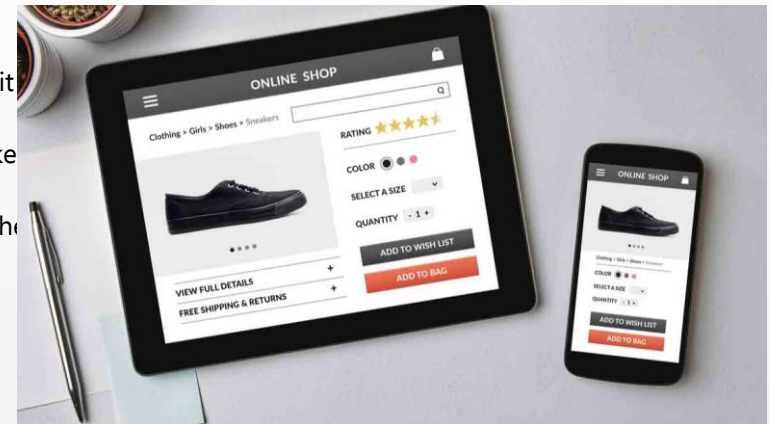

## Artificial Intelligence Applications: Marketing

Marketing is a way to sugar coat your products to attract more customers.

Before, we searched an online store to find a product without knowing its exact name, it

Now, we search for an item on any e-commerce store, we get all possible results. It's like

In a matter of seconds, we get a list of all relevant items. An example of this is finding the

One reason why we're all obsessed with Netflix. It examines millions of

As the data set grows, this technology is getting smarter and smarter e

Sugarcoat: to make something seem more positive or pleasant than it really is

## Artificial Intelligence Applications: Banking

AI in banking is growing faster than you thought!

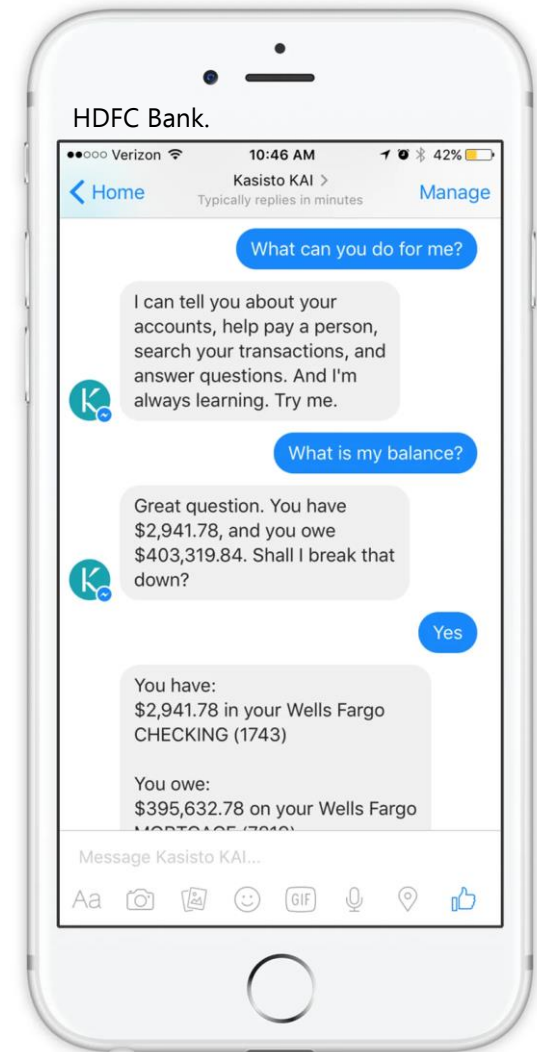

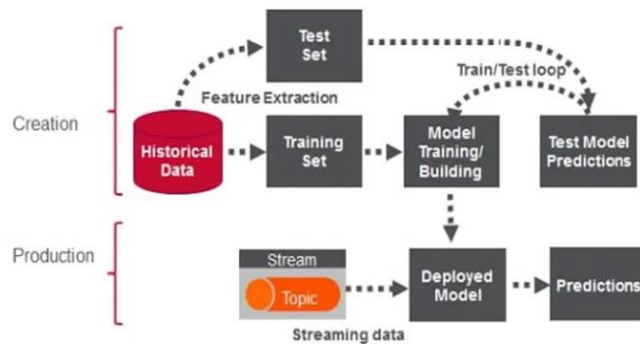

A lot of banks have already adopted AI-based systems to provide

Customer support,

Detect anomalies

Credit card frauds.

### Credit Card Fraud Detection

Companies such as MasterCard and RBS WorldPay have relied on AI and [Deep Learning](#) to detect fraudulent transaction patterns and prevent card fraud for years.

## Artificial Intelligence Applications: Finance

Ventures have been relying on computers and data scientists to determine future

Trading mainly depends on the ability to predict the future accurately.

Machines are great at this because they can crunch a huge amount of data in a sh

Machines can also learn to observe patterns in past data and predict how these pa

Left traders, Center " common machine trading systems, Right HFT high frequency trading (ML)

## Artificial Intelligence Applications: In Agriculture

Plantix - a mobile app revolutionizes farming with a little help from AI

Plantix was developed by PEAT GmbH, a Berlin-based AI startup.

The app claims to diagnose pest damages, plant diseases and nutrient deficiencies affecting crops and offers corresponding treatment measures.

## Artificial Intelligence Applications: In HealthCare

AI applications are used in healthcare to build sophisticated machines that can detect diseases and identify cancer cells.

Coala life which is a company that has a digitalized device that can find cardiac diseases.

Aifloo is developing a system for keeping track of how people are doing in home care.

The best thing about AI in healthcare is that you don't even need to develop a new medication. Just by

**Real-time Heart Monitor  
with P-wave based AF detection**

Prescribe. Diagnose. Act.

The only patch-free Remote Heart Monitor that provides real-time diagnostic-quality ECG analysis and heart sound recordings simultaneously to the patient and healthcare provider. FDA cleared and used by thousands of patients.

**COALA®**

## Artificial Intelligence Applications: Gaming

Another sector where Artificial Intelligence applications have found prominence is the gaming sector.

AI can be used to create smart, human-like NPCs to interact with the players.

AI in gaming refers to responsive and adaptive video game experiences.

These AI-powered interactive experiences are usually generated via non-player characters, or NPCs, that  
Deep Blue was a [chess-playing expert system](#) run on a unique

Go is a game invented thousands of years ago in China and has evolved into one of the most complex and

The Go community was devastated when DeepMind's AlphaGo defeated Lee Sedol in four out of five matches.

By defeating the next four best players on Earth, AlphaGo demonstrated to everyone that AI is superior to

NPCs, or non-player characters, are the characters in a game that are controlled by the game itself, rather than by the player.

## Artificial Intelligence Applications: Space Exploration

Space expeditions and discoveries always require analyzing vast amounts of data.

Artificial Intelligence and Machine learning is the best way to handle and process data on this scale.

Many companies, such as [NASA](#), the [European Space Agency](#) (ESA) and [SpaceX](#), are already using AI as a way to improve exploration, find new celestial objects

Robonaut is a dexterous humanoid robot designed to expand NASA's ability for construction and

Dexterous: having the [ability](#) to [perform](#) a [difficult](#) [action quickly](#) and [skilfully](#) with the [hands](#)

[roverNasa](#)

AUTONOMOUS ROVERS

IMAGE ANALYSIS AUTOMATION

INTELLIGENT NAVIGATION SYSTEM

## Artificial Intelligence Applications: Autonomous Vehicles

The development of autonomous vehicles will definitely revolutionaries the transport system.

The AI system collects data from the vehicles radar, cameras, GPS, and cloud services to process the information.

Advanced Deep Learning algorithms can accurately predict what objects in the vehicle's environment.

Waymo, a division of Alphabet, became the first company to offer self-driving car services.

Dexterous: having the [ability](#) to [perform](#) a [difficult](#) [action quickly](#) and [skilfully](#) with the [hands](#)

[autoXChina](#)

[roverNasa](#)

## Artificial Intelligence Applications: Chatbots

[AI chatbots](#) can comprehend natural language and respond to people online who use the "live chat" feature th

As AI continues to improve, these chatbots can effectively resolve customer issues, respond to simple inquiries,

Amazon's Echo is an example of how Artificial Intelligence can be used to translate human language into desira

It can do more than just play your favorite songs. It can be used to control the devices at your house, book cab
